This project has received funding from the European Union's Horizon 2020 Research and Innovation Programme under grant agreement No 833672. The content reflects only the SHOTPROS consortium's view. Research Executive Agency and European Commission is not liable for any use that may be made of the information contained herein.

### What is SHOTPROS?

SHOTPROS will develop a curriculum and a **Virtual Reality training** solution for **police officers**.

The training is based on an evaluated **Human Factors Model for Decision Making and Acting under Stress and in High Risk Situations (DMA-SR)**. Such a model is vital to understand how decisions in the presence of diverse stress cues are made.

The **multinational** project is funded by the **Horizon 2020** programme.

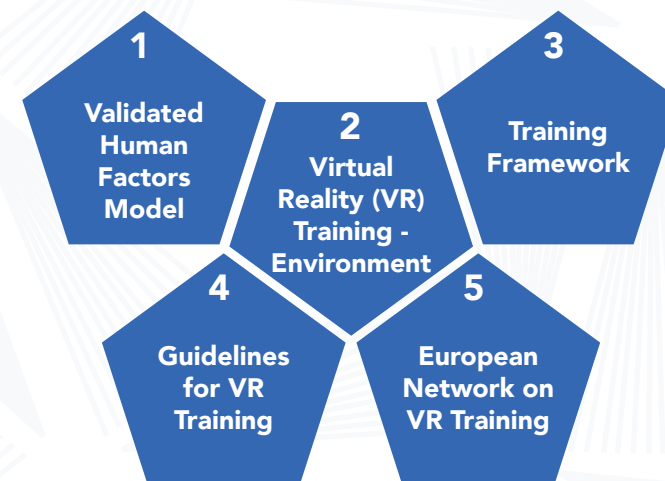

### Why do we need SHOTPROS?

Within the last decade, the number of incidents where **police officers** are **first responders** in critical situations with severe threat circumstances has **drastically increased**.

A major challenge is to properly **evaluate the situation** and **decide** how to further proceed and to assess and choose the most appropriate strategy.

Therefore, an **innovative** decision making and acting based **training framework** is the go forward solution to prepare street patrol officers for these new challenges.

- Added value of DMA-SR Training for the combat against crime and terrorism for European LEAs
- Societal impact of SHOTPROS and the benefits for European citizens
- Project's compliance with regulations on ethical, legal, safety and privacy in the field
- Awareness of the importance of DMA-SR to follow the European Security Strategy
